

Garden Event

10-16-21, 10am-12noon, Zoom, Turning Your Garden into a Haven for Wild Birds with Scott Logan

Description = Attracting wild birds into our gardens adds beauty in the way of life, color and song. Wild birds also offer some of the best organic pest control available. But most birds are really not that interested in the “well pruned” and “non-native” urban landscapes. In this presentation, Scott will discuss what wild birds are looking for before settling down in new avian real estate. Different species exploit different niches and knowing what these differences are will help you create an attractive environment for these remarkable animals. As the saying goes, “built it and they will come”.

Cost = \$15 members, \$20 non-members
