

Garden Event

10-24-20, 10am-12noon, Online Webinar, Right Tree, Right Place – Pruning and Care with Dr. Jerrold Turney

Day/Date = Saturday, 10-24-20

Time = 10am-12noon

Title = Right Tree, Right Place – Pruning and Care by Dr. Jerrold Turney

Description = This is the second of three Saturday morning Tree Workshops being held in conjunction with our Free Tree Giveaway. Dr. Turney, who led a great workshop on Tree Selection and Siting (workshop #1), will be back to teach us the right way to prune trees and care for our trees. Pruning your tree properly can promote the tree's health, make it resistant to diseases, and stimulate structurally secure branching. Training a young tree with the correct pruning cuts is especially important as this will help your tree grow into an attractive mature specimen that is less prone to failure. Your tree may even live longer. Dr. Turney will also tell us how to care for our new trees to get them off to a great start and how to care for our mature trees. The workshop will include an optional paper tree pruning exercise. Dr. Turney was senior biologist/plant pathologist at the Department of Agricultural Commissioner for Los Angeles County until his retirement early this year. He has taught courses in tree identification, tree pruning and care, and irrigation design at the Arboretum.

Cost = Free
