

## Garden Event

9-23-24 through 12-9-24, Mondays, 6-9pm, Zoom, Regenerating Essential Goods and Services in America's Urban Landscapes, UCLA Extension Horticulture Program Course

Description = The surest way to slow or stop climate change and specie loss is to set aside half the planet for native and natural endeavors. Half of Earth is left to run wild. The other half is dedicated to human needs. The only way this idea will work is if urban areas start shouldering the needs of their consumptive members. We need to stop our needs from overrunning distant landscapes and start creating deeper and richer connections to our own. Students of this class will learn about regenerating goods and services. More specifically, we will be exploring the capturing, growing, and harvesting of craft and ceremonial items, building materials, local energies, food, landscapes materials, public health, self-care, thermal comfort, and making the most of greywater and stormwater. This 11-week class is hands-on and will require no less than 5 hours a week. You will be expected to do assessments, simple designs, and physically interact with urban landscapes.

Cost  
\$670

Location = Live Online Zoom
